NOLT FINANCE

HR Employee Lifecycle Portal

PRODUCT REQUIREMENTS DOCUMENT (PRD)

Pre-Onboarding, Onboarding & Induction, Post-Onboarding and Offboarding

Document status	Draft for stakeholder review
Version	1.0
Date	9 September 2026
Product owner	NOLT Finance - Human Resources
Primary users	HR/Admin, Employees, Guarantors/External Respondents
Prepared from	NOLT HR Policy Manual and onboarding forms supplied for this project

Confidential working document. Requirements marked “HR decision required” must be validated before production implementation.

1. Executive Summary

NOLT Finance currently uses multiple HR forms, policy acknowledgements, document uploads and manual review steps during the employee lifecycle. This PRD defines a secure web-based portal that centralises those activities, gives employees a clear checklist and progress view, and gives HR a controlled review and audit workflow.

Product vision
A single HR lifecycle portal where HR can invite an employee, assign the correct requirements, collect forms and supporting documents, review each item, request corrections with reasons, complete induction steps, track company assets, and later manage exit clearance without relying on fragmented email chains.

1.1 Core outcomes

- Reduce HR follow-up effort by making requirements, due items and rejection reasons visible to employees.
- Create one source of truth for onboarding status, submissions, approvals, acknowledgements and audit history.
- Convert suitable paper/PDF forms into structured digital forms while retaining upload capability where originals or supporting evidence are required.
- Provide role-based access to sensitive personal, health, banking and employment information.
- Make the platform extensible from onboarding into a complete employee lifecycle process, including offboarding and asset return.

1.2 Recommended delivery approach

Phase	Scope	Outcome
Phase 1 - Core portal	Authentication; employee creation; email invite; employee checklist; forms; uploads; save draft; submit; HR approve/reject; rejection reasons; progress; audit log.	Usable minimum viable onboarding portal.
Phase 2 - NOLT workflows	Guarantor links; policy acknowledgement; confidentiality; indemnity; beneficiary; HMO; induction; work tools; export templates.	Replaces most manual onboarding administration.
Phase 3 - Offboarding	Exit initiation; handover; asset return; department clearance; exit interview; final HR closure.	Full employee lifecycle coverage.

2. Source Documents Reviewed

The requirements in this PRD are grounded in the documents supplied for the project. Where two source documents conflict, the PRD does not silently choose one rule; the issue is listed as a decision for HR.

Source	Key requirements extracted
NOLT Human Resource Policy Manual, Version 2.0	Pre-employment requirements; biodata; two guarantors and two references; personnel documents; induction; HR policy acknowledgement; company property; separation; exit interview.
Employee Data Form	Personal/contact information; education; bank/pension/tax; next of kin; emergency contact; health information.
Employee Declaration & Background Information	Criminal/misconduct/investigation declarations; truthfulness declaration; consent for checks.
NOLT Guarantor Form	Guarantor undertaking; guarantor details; ID/address/income evidence; passport/signature; guarantor eligibility requirements.
NOLT Confidentiality Agreement	Employee confidentiality obligations, governing law/data protection and signature sections.
Employee Indemnity Agreement	Employee obligations, post-employment obligations, guarantor/surety and NOLT execution sections.
Beneficiary Nomination Form	Employee details; multiple beneficiaries and proportions; guardian/trustee for minors; authorisation.
AXA HMO Enrollment Sheet	Consent text and enrolment fields including plan, staff ID, dependent status, relationship, hospital selection and pre-existing condition.
New Employees Induction Checklist	Personal documentation, company orientation, conditions of service, HMO, rules, job, welfare, safety, tours and sign-off.
Assigned Work Tools Form	Asset item, quantity, serial number, issues, employee acknowledgement; return on exit.

3. Product Context, Problem and Goals

3.1 Current-state problems

- Employees can be unsure which forms and documents are still outstanding.
- HR must manually chase submissions and explain rejected items by email or messaging.
- Information is duplicated across forms and spreadsheets, increasing re-entry and inconsistency.
- Approvals are difficult to audit when they happen outside a central system.
- Sensitive documents may be shared through channels that do not provide appropriate access control or retention management.
- Company asset records used during onboarding are not automatically connected to offboarding return checks.

3.2 Product goals

- Provide a secure employee self-service onboarding workspace.
- Enable HR to assign requirements by employee type or onboarding template.
- Provide item-level statuses and reasons for required corrections.
- Allow forms to be saved as drafts and resumed later.
- Maintain versioned acknowledgements for policies and agreements.
- Support document review, resubmission and audit history.
- Enable structured export where third-party providers require spreadsheets or documents.
- Create a foundation for employee exit clearance and asset return.

3.3 Non-goals for the first release

- Payroll processing
- Full performance management
- Leave management
- Recruitment applicant tracking before offer acceptance
- Employee scheduling/time-and-attendance
- Replacing third-party HMO/insurance systems themselves

4. Users and Permissions

Role	Primary responsibilities	Access principles
HR Administrator	Create/invite employees, assign requirements, review submissions, approve/reject, manage templates, view reports and audit history.	Broad HR access, but sensitive categories should be permission-controlled.
HR Reviewer / Operations	Review assigned sections such as induction, assets, credentials or HMO.	Only modules/records explicitly authorised.
Employee	Complete assigned forms, upload documents, sign/acknowledge, view statuses/reasons and resubmit.	Own record only.
Guarantor / External Respondent	Complete a secure guarantor or reference request via invitation link.	Only the specific request; no employee portal access.
System Administrator (optional)	Manage technical configuration, roles, integrations and support.	No routine access to HR content unless explicitly authorised.

4.1 Permission principles

- Least privilege: users see only what they need for their role.
- Health and bank/pension/tax information should be separated from general onboarding permissions.
- Employee-submitted files must be private by default; no public URLs.
- Every approval, rejection, resubmission, policy acknowledgement and administrative change must be attributable to a user and timestamp.

5. End-to-End Lifecycle

The product should model the employee journey as a lifecycle rather than as a collection of unrelated forms.

Stage	Trigger	Main activities	Exit condition
Invitation	HR creates employee and sends invite	Account activation, view requirements, start forms/uploads.	Employee activates access.
Pre-Onboarding	Invitation accepted	Biodata, background declaration, guarantors/references, credentials, medical report and other assigned items.	Mandatory pre-start items approved or waived by HR.
Ready to Resume	HR confirms readiness	Start-date confirmation and any outstanding first-day items.	Employee resumes.
Onboarding & Induction	Employee marked resumed	Policy acknowledgement, confidentiality, indemnity, beneficiary, HMO, induction, job description, work tools.	All mandatory onboarding/induction items complete.
Onboarding Complete	HR closes onboarding	Employee record retained; outstanding conditional actions can remain tracked.	Lifecycle remains active until exit event.
Offboarding	HR initiates separation	Notice/handover, return property, departmental clearances, exit interview.	Final HR closure.

5.1 Overall employee status

- Invited
- Pre-Onboarding
- HR Review
- Action Required
- Ready to Resume
- Induction
- Onboarding Complete
- Offboarding
- Exited

5.2 Requirement item status

Standard status model
Not Started -> Draft -> Submitted -> Under Review -> Approved. If correction is needed: Under Review -> Changes Required -> Resubmitted -> Under Review -> Approved. Agreement workflows may also use Awaiting Employee, Awaiting Guarantor/Witness, Awaiting NOLT Signatory and Completed.

6. Functional Requirements - Core Platform

ID	Capability	Requirement	Priority
FR-001	Authentication	Users can securely sign in using email-based account access. Password reset or passwordless authentication must be supported.	P0
FR-002	Employee creation	HR can create an employee with name, work/personal email as appropriate, job title, department, employment type, start date and onboarding template.	P0
FR-003	Invitation email	HR can send and resend a secure invitation. Invite links expire and cannot be reused indefinitely.	P0
FR-004	Checklist	Employee dashboard displays every assigned requirement with current status and required action.	P0
FR-005	Progress	System shows overall completion percentage based on mandatory assigned requirements.	P0
FR-006	Save draft	Structured forms save as draft and can be resumed.	P0
FR-007	Submit	Employees can submit a completed form or uploaded requirement for HR review.	P0
FR-008	Review	Authorised HR users can open submission details and attachments.	P0
FR-009	Approve	HR can approve an item, recording reviewer and timestamp.	P0
FR-010	Changes required	HR can return an item and must provide a reason visible to the employee.	P0
FR-011	Resubmission	Employee can correct/resubmit while prior versions remain in audit history.	P0
FR-012	Notifications	System emails the relevant party on invitation, submission outcomes and important outstanding actions.	P0
FR-013	Audit log	System records key lifecycle events and changes.	P0
FR-014	Search/filter	HR can search employees and filter by department, status, start date and employment type.	P1
FR-015	Template management	HR can define reusable onboarding templates and decide which requirements are mandatory/optional.	P1
FR-016	Reports/export	HR can export employee/onboarding status	P1

ID	Capability	Requirement	Priority
		and selected provider formats.	

7. Functional Requirements - NOLT-Specific Modules

7.1 Employee Data / Biodata

- Capture name, employment date/type, date/place of birth, nationality, marital details, residence/address, contact information, state of origin/LGA and emergency contact.
- Capture education history with qualification and date.
- Capture bank name/account number, pension administrator/number and tax ID.
- Capture next of kin details.
- Capture health information in a separately permissioned subsection.
- Where HR already entered employee identity/employment data, fields should be prefilled to reduce duplicate entry.

7.2 Background Declaration

- Yes/No questions for criminal record, fraudulent/dishonest/misconduct activity, and investigations.
- If any answer is Yes, explanation becomes mandatory.
- Employee must confirm truthfulness and consent to verification/background checks before submission.
- Declaration version, timestamp and employee acknowledgement must be retained.

7.3 Supporting Documents

- Configurable upload slots for passport photo, pre-employment medical report, former employer reference, character reference, birth certificate, secondary certificate, degree certificate, NYSC certificate/exemption, postgraduate certificate and other HR-requested evidence.
- Allowed file types and maximum size must be configurable.
- HR can mark a document as Not Applicable or Waived with a reason.
- Each document has its own review status; one rejected document must not invalidate unrelated approved items.

7.4 Guarantors and References

- Default template should support two guarantors and two references where required by HR policy.
- Employee enters guarantor/reference name, email and phone and sends a secure request.
- Guarantor can complete their own undertaking/details and upload supporting evidence without seeing the employee portal.
- Guarantor evidence can include government ID, proof of address, proof of income and passport photograph where required.
- HR can review each guarantor independently and request replacement/correction.
- Guarantor invitation status: Not Invited, Invited, Opened, Draft, Submitted, Changes Required, Approved.

HR decision required - conflicting source rule
The HR Policy Manual states an immediate-family member may be a guarantor, while the supplied Guarantor Form states that a guarantor must not be a family member or relative. Production validation must remain configurable until HR confirms the governing rule.

7.5 HR Policy Manual & Acknowledgement

- HR can upload/publish a policy manual version with effective date and version number.
- Employee can open/read the manual from the portal.
- Acknowledgement records staff name, date of resumption, date read, version read and signature/acknowledgement date.
- If a new version is published, HR can require affected employees to acknowledge the new version without overwriting earlier evidence.

7.6 Confidentiality Agreement

- Display the approved agreement text/version to the employee.
- Capture employee name, designation, signature/acknowledgement and date.
- Support NOLT signatory and witness sections where the approved legal process requires them.
- Retain an immutable completed copy or rendered agreement record for audit.

7.7 Employee Indemnity Agreement

- Populate employee identity/designation into the agreement where possible.
- Support staged execution by Employee -> Guarantor/Surety -> NOLT signatory as configured.
- Each signatory step is timestamped and cannot be silently overwritten.
- Completed agreement is locked and retained as a versioned record.

7.8 Beneficiary Nomination

- Capture employee/assured details.
- Allow one or more beneficiaries with surname, first name, relationship, allocation percentage, date of birth and contact/address.
- Validate that total beneficiary percentage equals 100% before final submission, unless HR/provider rules explicitly allow otherwise.
- Where a beneficiary is under 18, prompt for guardian/trustee details.
- Capture employee authorisation/signature and date.
- HR can export or download the completed record for insurance administration.

7.9 AXA HMO Enrollment

- Present the supplied AXA consent wording or an HR-approved current version and capture consent.
- Capture enrollee number (for additions), surname, first/middle name, plan, plan type, staff ID, member/dependent status, relationship, enrollment date, sex, DOB, phone, pre-existing condition, primary/secondary hospital, official email and address.
- Allow family/dependent rows where applicable.
- Provide an HR export matching the AXA enrollment spreadsheet columns so HR does not have to rekey portal data manually.

7.10 Assigned Work Tools / Assets

- HR/Admin can assign asset items such as laptop/charger/adapter, phone, mouse, ID card, MTN SIM, laptop stand, laptop bag and configurable “other” items.
- For each asset record: item, quantity, serial/identifier, issue condition, issue notes, issued date and issued by.
- Employee acknowledges receipt and any identifiable issues.
- Assets remain linked to the employee record for offboarding return and clearance.

7.11 New Employee Induction Checklist

- Induction sections should mirror the source checklist: personal documentation, company, conditions of service, health/HMO, rules and regulations, employee job, welfare, safety and tours.
- HR/relevant facilitator marks each item Done or Not Done and may add notes/date.
- Employee confirms receipt of induction training.
- Head of Operations/HR or authorised role certifies completion.
- Overall induction status is complete only when all mandatory items are done and both required acknowledgements are present.

8. Offboarding Requirements

Offboarding is recommended as Phase 3, but the data model should support it from the start because onboarding asset records and policy obligations directly affect exit clearance.

ID	Requirement
OFF-001	HR initiates an exit case with reason/type, expected last day and notice details.
OFF-002	Employee can upload or complete a comprehensive handover note.
OFF-003	System creates an asset-return checklist from assets previously assigned to the employee.
OFF-004	HR can track return of ID card, HMO card, phone/SIM and other company property.
OFF-005	Departments can record clearance status and comments where NOLT chooses to use departmental clearance.
OFF-006	HR records exit interview responses/notes and completion date.
OFF-007	Employee access is deactivated according to HR/IT policy after closure.
OFF-008	Final exit record retains audit history and returned/outstanding asset details.

9. Information Architecture and Screen Map

9.1 Employee portal

Screen	Purpose	Key elements
Login / Invite activation	Secure access	Invite validation, account setup, password/passwordless flow.
Home / My Onboarding	Immediate progress view	Progress bar; stage; outstanding actions; recently updated statuses.
My Checklist	All assigned requirements	Status chips; due dates; action buttons; rejection reason.
Form Workspace	Complete structured form	Sections; validation; save draft; submit; declaration/consent.
Documents	Upload/view evidence	Upload slot; file metadata; status; replacement/resubmission.
Guarantors / References	Invite and track external respondents	Invite details; status; resend; replace contact.
Agreements & Policies	Read/acknowledge/sign	Document viewer; version; acknowledgement/signature.
Benefits / HMO	Complete HMO/beneficiary data	Consent; enrolment data; beneficiaries/dependents.
Induction	View completed induction and sign-off	Checklist summary; employee confirmation.
Notifications / Activity	See relevant updates	Submission outcomes, reminders, status history.

9.2 HR/Admin portal

Screen	Purpose	Key elements
Admin Dashboard	Operational overview	KPIs; pending review; action required; upcoming start dates; completed onboarding.
Employees	Directory and filtering	Search; filters; status; progress; start date; department.
Create Employee	Start lifecycle	Identity/job details; template; requirements; send invite.
Employee Record	360-degree HR onboarding view	Overview; checklist; forms; documents; guarantors; induction; assets; audit.
Review Queue	Process submissions efficiently	Pending items by type/date/employee; approve; changes required.
Templates	Configure onboarding packages	Mandatory/optional requirements by employment type/role.
Policies & Agreements	Manage published versions	Version, effective date, status, acknowledgement coverage.
Assets	Manage issue/return	Asset catalogue/assignments; employee acknowledgement; return state.
Reports & Exports	Operational reporting	Status export; outstanding items; HMO/provider exports.
Settings / Roles	Permissions and configuration	Roles; data access; file limits; notification

Screen	Purpose	Key elements
		templates.

10. Key User Stories and Acceptance Criteria

US-01 - As HR, I want to invite a new employee so they can complete onboarding before resumption.

- Acceptance: HR can create the employee and select an onboarding template.
- Acceptance: The system sends an invitation to the entered email.
- Acceptance: The invitation action is logged.
- Acceptance: HR can resend an invitation without creating a duplicate employee.

US-02 - As an employee, I want to see exactly what I need to complete so I do not have to ask HR.

- Acceptance: Dashboard lists every assigned requirement and its status.
- Acceptance: Outstanding/action-required items appear prominently.
- Acceptance: Progress updates after valid completion/approval events.
- Acceptance: Rejected items show the HR reason and a resubmit action.

US-03 - As HR, I want to reject an incomplete document with a reason so the employee knows what to fix.

- Acceptance: Reviewer cannot select Changes Required without entering a reason.
- Acceptance: Employee receives notification.
- Acceptance: Reason is visible on the relevant item only.
- Acceptance: Previous submission remains retained in history after replacement.

US-04 - As an employee, I want to save a long form and return later so I do not lose work.

- Acceptance: Save draft is available before final submission.
- Acceptance: Draft data is restored on next login.
- Acceptance: Incomplete required fields do not block saving a draft.
- Acceptance: Final submission does enforce required validation.

US-05 - As HR, I want guarantors to submit information directly so sensitive supporting evidence is not passed through the employee unnecessarily.

- Acceptance: Employee/HR can trigger a secure guarantor invitation.
- Acceptance: Guarantor sees only their request.
- Acceptance: Link expires or requires verification.
- Acceptance: HR can review the guarantor response independently.

US-06 - As HR, I want policy acknowledgements tied to versions so I can prove what an employee accepted.

- Acceptance: Each acknowledgement references policy version/effective date.
- Acceptance: Employee identity and timestamp are retained.
- Acceptance: Publishing a new version does not modify historical acknowledgement records.

11. Logical Data Model

The database implementation can vary by technology, but the following logical entities should exist to avoid hard-coding the current forms.

Entity	Purpose / important fields
User	id, email, authentication status, role, last login, active flag.
Employee	user_id, employee/staff ID, names, department, role, employment type, start date, lifecycle status.
OnboardingCase	employee_id, template_id, stage, progress, invited_at, ready_to_resume_at, completed_at.
RequirementDefinition	name, category, form/upload/agreement/checklist type, mandatory rule, review role.
AssignedRequirement	case_id, requirement_id, status, due date, not-applicable/waiver reason.
FormSubmission	assigned_requirement_id, schema/version, draft/submitted data, submitted_at.
DocumentVersion	assigned_requirement_id, secure file reference, filename, MIME type, uploaded_by, uploaded_at, version.
ReviewDecision	item/submission id, reviewer, decision, reason, timestamp.
ExternalRequest	employee_id, type (guarantor/reference), recipient details, token status, request status.
PolicyDocument	title, version, effective date, file reference, status.
Acknowledgement	employee_id, document/version, acknowledgement type, signed/confirmed at, evidence.
Beneficiary	employee_id, beneficiary details, allocation %, guardian/trustee linkage.
HMOEnrollment	employee/dependent rows and AXA-required fields, consent record.
Asset	asset type, serial/identifier, status.
AssetAssignment	asset_id, employee_id, quantity, issue date/condition, acknowledgement, return date/condition.
InductionChecklist	employee_id, checklist version, item completion, facilitator, employee sign-off, HR sign-off.
OffboardingCase	employee_id, separation type, last day, handover, exit interview, final status.
AuditEvent	actor, action, target entity, before/after summary, timestamp, IP/device metadata where appropriate.

12. Business Rules and Validation

Rule	Definition
BR-01	An employee cannot see another employee record.
BR-02	A requirement can be mandatory, optional, not applicable or waived. Waivers require reason and authorised actor.
BR-03	An approved submission cannot be directly edited. A correction creates a new version/review cycle.
BR-04	Changes Required always requires reviewer comments/reason.
BR-05	Progress is calculated from assigned mandatory requirements, not from a fixed global list.
BR-06	Employee onboarding cannot be marked complete while mandatory requirements remain unapproved/incomplete unless explicitly waived.
BR-07	Beneficiary allocation should equal 100% before final submission unless HR/provider config says otherwise.
BR-08	Health and financial details require restricted access groups.
BR-09	External request links are scoped to one request and expire.
BR-10	Policy/agreement acknowledgements retain the exact version accepted.
BR-11	Assigned assets cannot be marked fully cleared at exit until each expected return is recorded or exception approved.
BR-12	Guarantor-family eligibility rule remains configurable pending HR decision.

13. Notifications and Communication

Event	Recipient	Example purpose
Employee invitation	Employee	Welcome and secure onboarding link.
Reminder	Employee	Outstanding or due requirements.
Submission received	Employee	Confirmation that an item was submitted.
Changes required	Employee	Reason and direct link to correct/resubmit.
Item approved	Employee	Status confirmation.
Guarantor/reference request	External respondent	Secure link to complete request.
External response submitted	HR	Prompt HR review.
Ready to resume	HR / employee	Pre-onboarding threshold reached.
Onboarding complete	Employee / HR	Completion confirmation.
Offboarding actions	Employee / reviewers	Handover/asset/clearance actions.

Notification wording should be configurable by HR, and messages should not include sensitive document contents in email. Emails should direct users back to the secure portal.

14. Security, Privacy and Compliance Requirements

- All portal traffic must use HTTPS/TLS.
- Files must be stored privately with access controlled by authenticated, authorised requests.
- Passwords, if used, must be securely hashed; no plaintext password storage.
- Multi-factor authentication should be available for HR/Admin accounts and considered mandatory for privileged access.
- Role-based access control must distinguish general HR data from sensitive health and financial information.
- Administrative and review actions must be logged.
- Uploaded files must be validated for permitted type/size and scanned for malicious content where production infrastructure allows.
- Data retention/deletion rules must be defined by NOLT HR/legal/compliance before go-live.
- The platform should provide a process for correcting inaccurate personal data while preserving audit integrity.
- Consent/acknowledgement evidence must include version and timestamp.
- Backups and recovery procedures must be defined for production.

Compliance note
The supplied agreements reference Nigerian data protection obligations. Before production launch, NOLT should have legal/compliance review the portal privacy notice, consent wording, retention schedule and electronic-signature approach. This PRD is a product specification, not legal advice.

15. Non-Functional Requirements

Category	Requirement
Usability	Responsive design; clear plain-language status labels; accessible keyboard/form behaviour; mobile-friendly employee completion.
Performance	Normal dashboard/form pages should load quickly under expected staff volumes; large file upload progress should be visible.
Availability	Production deployment should include monitoring, backups and a documented recovery target appropriate to HR operations.
Scalability	Requirement templates/forms must be data-driven so new employment types and documents can be added without redesigning the entire database.
Auditability	Critical events must be traceable by actor and timestamp.
Accessibility	Use semantic labels, visible focus, sufficient contrast and accessible error messages; target WCAG 2.1 AA where practical.
Browser support	Current major desktop browsers and modern mobile browsers.
Data portability	HR can export employee status and selected provider datasets in commonly usable formats.

16. Admin Dashboard and Reporting

16.1 Recommended dashboard KPIs

- Total active onboarding cases
- Awaiting employee action
- Awaiting HR review
- Changes required
- Ready to resume
- Starting within 7 days
- Onboarding complete this month
- Overdue requirements

16.2 Core reports

- Employee onboarding status report.
- Outstanding requirements by employee/department/start date.
- Pending review queue age.
- Guarantor/reference response status.
- Policy acknowledgement coverage by version.
- Induction completion report.
- Asset assignment/return report.
- HMO export in AXA-required column structure.
- Offboarding clearance report (Phase 3).

17. Recommended Technical Architecture

The final technology stack can be selected by the development team. The product architecture should separate the user interface, API/business logic, relational data, secure object/file storage, email service and audit/notification components.

Layer	Recommendation / responsibility
Frontend	Responsive web application for HR, employee and external request flows.
Backend/API	Authentication, permissions, lifecycle rules, review workflow, form validation, notifications and exports.
Relational database	Employees, cases, requirements, statuses, submissions, reviews, acknowledgements, assets and audit metadata.
Private file storage	Uploaded documents and generated signed/completed artefacts; access via short-lived authorised links.
Email provider	Invitation, reminder and status notifications.
Background jobs	Email sending, file scanning, export generation and scheduled reminders.
Observability	Application logs, error tracking, health monitoring and audit monitoring.

A suitable implementation could use a modern web framework with PostgreSQL and private object storage. The exact stack is intentionally not mandated by this PRD so the team can select tools that fit NOLT hosting, security and maintenance requirements.

18. MVP Backlog and Release Plan

Release	Must include	Can follow
MVP / Phase 1	Admin/employee auth; employee creation; invite email; checklist; core digital forms; file uploads; draft/submit; review; approve/changes required; resubmit; progress; audit.	Advanced templates, reminders, detailed analytics.
Phase 2A	Guarantor/reference external links; policy manual acknowledgement; confidentiality; indemnity; beneficiary.	Electronic signature integration if NOLT chooses a third-party signature provider.
Phase 2B	AXA HMO module/export; induction checklist; assigned work tools; reports.	Additional insurer/provider exports.
Phase 3	Offboarding, handover, asset return, exit interview, clearance.	Automation with IT/account deprovisioning if integrations are later available.

19. Testing and Go-Live Acceptance

19.1 Minimum test scenarios

- New employee invitation and activation.
- Draft save/reopen on every structured form.
- Required-field validation at final submission.
- File upload validation and secure retrieval.
- Approve and changes-required flows with correct notifications.
- Resubmission while preserving earlier versions.
- Employee isolation: employee A cannot access employee B data/files.
- HR role restrictions for health/financial sections.
- Expired external guarantor link handling.
- Policy version acknowledgement history.
- Beneficiary percentage validation.
- AXA export column mapping.
- Induction dual sign-off.
- Asset issue/acknowledgement and later return linkage.
- Audit log creation for all critical events.

19.2 Go-live gates

- HR signs off the final onboarding requirement templates.
- Legal/compliance signs off privacy notice, data retention and electronic acknowledgement/signature approach.
- Guarantor-family eligibility conflict is resolved.
- Production roles/permissions are approved.
- Email domain/sender is configured.
- Backup, restore and incident ownership are documented.
- Pilot run is completed with test employees before full rollout.

20. Open Decisions for NOLT HR

Decision	Why it matters	Recommended default
Include offboarding in initial release?	Changes project size and timeline.	Build data model now; deliver offboarding in Phase 3.
Can guarantors be family members?	Source documents conflict.	Do not enforce until HR confirms; keep rule configurable.
Electronic acknowledgement vs handwritten/e-sign provider?	Affects agreement execution and evidential approach.	Use portal acknowledgement for policy/declarations; legal review for agreements requiring signatures/witnesses.
Employee login method	Security and user friction.	Email + password or passwordless magic link; MFA for HR.
Which documents are mandatory by employment type?	Controls progress and Ready-to-Resume status.	Create templates by Permanent/Contract/Other.
Who can see health and banking information?	Sensitive access control.	Separate restricted HR permission groups.
Reminder schedule	Determines automated chasing.	Configurable reminders, e.g. 7/3/1 days before start and overdue.
Document retention period	Compliance and storage.	Define with legal/compliance before launch.
AXA export ownership	Determines workflow after employee submission.	HR reviews, then exports approved rows.

21. Requirements Traceability to Supplied Documents

Portal module	Primary source evidence
Pre-employment readiness	HR Policy Manual: pre-employment medical report and pre-employment requirements.
Biodata / Employee Data	HR Policy Manual biodata requirement + Employee Data Form.
Two guarantors / two references	HR Policy Manual guarantors and references.
Credentials uploads	HR Policy Manual personnel documents list.
Background declaration	Employee Declaration & Background Information form.
Guarantor workflow	NOLT Guarantor Form + HR Policy Manual.
Policy acknowledgement	HR Policy Manual Appendix 2.
Confidentiality	Employee Confidentiality Agreement + HR Policy ethics/confidentiality provisions.
Indemnity	Employee Indemnity Agreement.
Beneficiary	Beneficiary Nomination Form.
HMO	AXA HMO Consent Form and Enrolment Template + induction checklist medical provision.
Induction	New Employees Induction Checklist.
Work tools/assets	Assigned Work Tools form + HR Policy company property/exit obligations.
Offboarding	HR Policy separation, property return and exit interview provisions.

22. Definition of Done for the Product

The NOLT HR Employee Lifecycle Portal is considered successful when HR can move a new employee from invitation through approved pre-onboarding and completed induction without relying on separate email threads or manually maintained status spreadsheets, while the employee can always see what is required, what has been approved, what needs correction and why.

MVP definition of done
HR creates employee -> system sends secure invite -> employee completes forms/uploads -> employee sees progress -> HR reviews each requirement -> employee receives approval or correction reason -> employee resubmits where required -> HR can confirm Ready to Resume and later complete induction -> every material action is recorded in the audit history.

22.1 Suggested project name

NOLT HR Employee Lifecycle Portal (working name). The product can be renamed internally before UI design and deployment.

22.2 Next delivery artefacts

- UI wireframes / clickable prototype
- Final data dictionary and form schema
- Technical architecture diagram
- Database ERD
- API specification
- Implementation backlog with estimates
- Test plan and pilot checklist

Appendix A - Initial Digital Form Inventory

Form / module	Recommended digital treatment
Employee Data Form	Structured multi-step web form; sensitive health subsection; prefill known HR data.
Employee Declaration & Background Information	Structured questionnaire with conditional detail and consent/acknowledgement.
Guarantor Form	External secure structured form + supporting document uploads + staged review.
Confidentiality Agreement	Read-only agreement content + employee/NOLT/witness execution workflow based on legal decision.
Indemnity Agreement	Staged employee/guarantor/NOLT execution.
Beneficiary Nomination	Structured repeating beneficiary rows + allocation validation + guardian logic.
AXA HMO	Structured consent and enrollment; export to insurer template.
Induction Checklist	HR/facilitator checklist with employee and HR sign-off.
Assigned Work Tools	Asset assignment register + employee acknowledgement + offboarding return linkage.
HR Policy Manual Acknowledgement	Versioned digital acknowledgement linked to published manual.

Appendix B - Suggested Status Labels

Status	Meaning	Employee action
Not Started	Requirement assigned but untouched.	Start
Draft	Work saved but not submitted.	Continue
Submitted	Employee/external party submitted.	Wait
Under Review	HR is reviewing.	Wait
Changes Required	Reviewer needs correction/replacement.	Review reason and resubmit
Resubmitted	Corrected version submitted.	Wait
Approved	Requirement accepted.	None
Waived	Authorised HR exception.	None
Not Applicable	Requirement does not apply.	None
Completed	Multi-party agreement/checklist fully executed.	None
